

Abstract of the Disclosure

Cat Toy with a fishing reel and rod type assembly including a reel a rod and a handle , a hollow mouse shaped housing, a tether that connects the mouse housing with the reel, the handle being hollow and containing a battery power source and a gear reduced electric motor who's output shaft is connected to the reel so that when a person presses a switch on top of the handle, the tether is wound onto the reel, the hollow mouse body containing an electric motor having an off set weight attached to its shaft, an audio circuit and speaker and a motion switch so that when a cat moves said mouse, said mouse vibrates and makes a noise, and said hollow mouse body containing a recessed portion and closure for said recessed portion that allows the user to insert cat nip or the like. A preferred embodiment includes wherein the final gear of gear reduction assembly said is slidably engaged with said reel shaft so that a person can push on said reel shaft to slip it away from said gear reduction assembly thereby allowing the user to freely cast out said tether and attached mouse.
